Welcome, Joe Bloggs

Welcome to UQ DataSpace

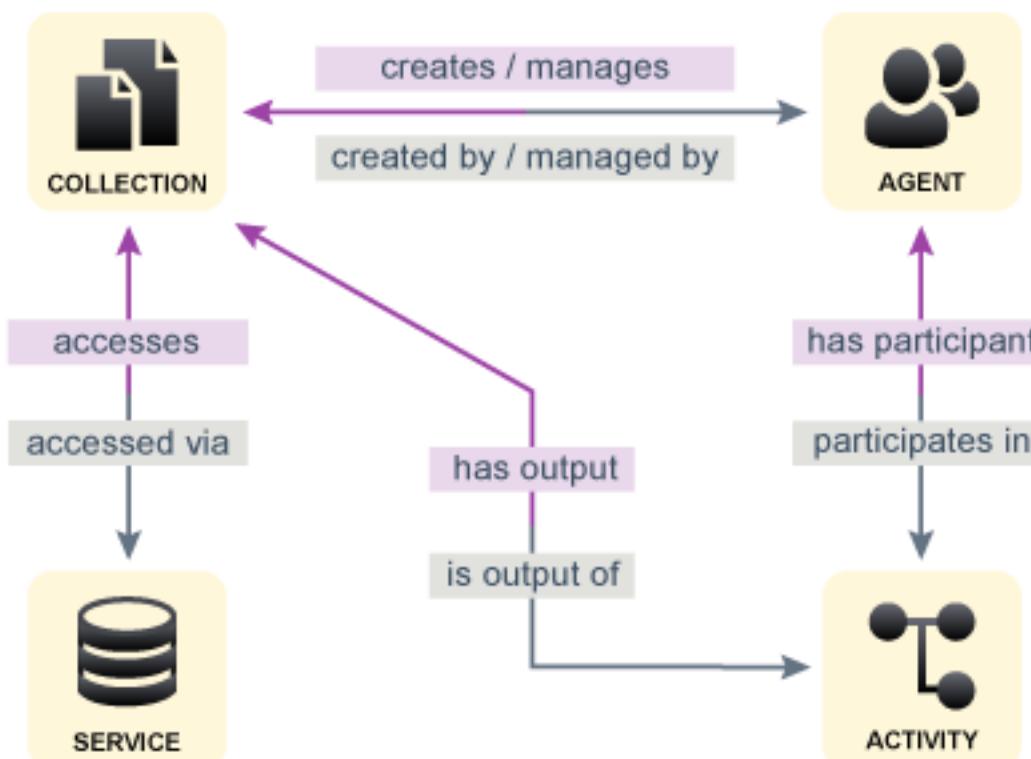

A catalog of the University of Queensland's research data assets

UQ DataSpace catalogs the research data outputs of staff and students at the University of Queensland. It aims to improve the visibility and accessibility of UQ data to the wider world.

The catalog contains descriptions of:

- [data collections](#);
- the [agents](#) (people and groups) that create and manage the data collections;
- the [activities](#) (projects) that funded the data creation; and
- the [services](#) for accessing and manipulating the data.

The concept

Identifier: <http://dataspace-uat.metadata.net/collections/3>**Variables derived from 2006 Census of Population & Housing and voting results at polling booth catchment level for 2007 Australian Federal Election**Placeholder text for alternative title *Placeholder text for alternative title*

Dataset derived from the 2006 Australian Census of Population and Housing, voting results for the 2007 Australian Federal election, and location of polling booths from the Australian Electoral Commission. Voting results data includes total and proportion of votes cast for each political party for all electoral divisions and polling booths in Australia. Coalition two party preferred and Labor two party preferred are also included in voting data. Polling booths and Census collection districts have been geocoded and spatially allocated to form polling booth catchments. Demographic and socio-economic characteristics of the populations living within the polling booth catchments are measured using variables derived from the 2006 Census that cover age & sex, family & household structure, housing tenure, ethnicity/race, religious affiliation, residential stability/mobility, digital divide, engagement in work, occupation, industry of work, human capital, and income.

About UQ DataSpace (beta)

UQ DataSpace catalogs the research data outputs of staff and students at the University of Queensland. It aims to improve the visibility and accessibility of UQ data to the wider world.

The catalog contains descriptions of:

- [data collections](#);
- the [agents](#) (people and groups) that create and manage the data collections;
- the [activities](#) (projects) that funded the data creation; and
- the [services](#) for accessing and manipulating the data.

UQ DataSpace aims to make UQ's research data visible and accessible at a national level by syndicating information to [Research Data Australia](#).

Describing your data

Have you got UQ research data you would like to share, or make better known?

Your dataset may be large or small, digital or paper-based — it doesn't matter. We would like to identify and describe your data, and upload the description to this catalog and [Research Data Australia](#). We are not offering to store your data — we only wish to describe it so that others can discover its existence (and re-use it if you give permission). If you are willing to be interviewed about your data, please contact info@dataspace.uq.edu.au.

Acknowledgements

The e-Research Group within the UQ School of ITEE developed this system based on the Apache Abdera open source software. Feel free to contact us regarding the system and the technology used to produce it.

This work supported by the [Australian National Data Service \(ANDS\)](#). ANDS is supported by the Australian Government through the National Collaborative Research Infrastructure Strategy Program and the Education Investment Fund (EIF) Super Science Initiative.
